Professional Summary

Data Analyst with a Statistics undergraduate foundation and an MSc in Data Science & Analytics, with hands-on experience in Python, SQL, Excel, and Tableau to clean, analyze, and visualize complex datasets. Skilled in KPI engineering, anomaly detection, and dashboard development across e-commerce, AdTech, IoT, and engineering domains, translating data findings into actionable business decisions.

Skills

Programming: Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), SQL, R, SAS, Git

Visualization: Tableau, Power BI (DAX), Advanced Excel (Pivot Tables, XLOOKUP, Data Cleaning, Formulas), Google Sheets

Databases, Cloud & Concepts: PostgreSQL, MySQL, MongoDB, BigQuery, Snowflake, AWS (EC2, S3, IAM, VPC, RDS, CloudWatch), JIRA | EDA, KPI Engineering, ETL, Statistical Testing, Data Modeling, Agile

Additional Exposure: Looker, VBA/Macros, Alteryx, A/B Testing

Professional Experience

Data Analyst Intern | Techzia Solutions LLP – Hybrid

February 2026 – July 2026

- Analyzed a 58,862-row vehicle telemetry dataset (temporal driving actions and tracking errors across 15 columns) using Excel, Python, and Power BI to surface trends in velocity, steering, acceleration, and error metrics.
- Cleaned and structured real-world sensor data from an IoT prototype vehicle, resolving inconsistencies and preparing analysis-ready datasets for downstream reporting.
- Built Power BI visualizations and DAX measures from telemetry and tracking-error data for driving-behavior analysis, and supported a team member on IoT sensor-integration and data quality checks.

Projects & Research

Customer Behaviour Analysis | Python, SQL, Power BI | [GitHub](#)

- Cleaned ~5,000 retail records in Python, resolving category-item inconsistencies via mapping dictionaries and standardizing column naming for SQL compatibility.
- Wrote 12 business-driven SQL queries using aggregations, window functions (RANK), and subqueries to analyze category revenue, discount effectiveness, and top-3 products per category.
- Built a multi-view Power BI dashboard across 7 dimensions; surfaced a counter-intuitive insight: non-discounted transactions outperformed discounted ones (\$502K vs \$492K), recommending discount strategy re-evaluation.

Marketing Campaign Performance Analysis | Excel, SQL, Tableau | [GitHub](#)

- Cleaned ~200,000 AdTech records in Excel; engineered KPIs (CTR, CPC, CPM) across 6 channels and used pivot tables to validate aggregated results before SQL-based analysis.
- Wrote SQL queries to compute per-channel impressions, clicks, CTR, CPC, CPM, and ROI; ranked channels by ROI and identified the top 10 highest-performing campaigns.
- Built a Tableau dashboard (Clicks, CTR, ROI by Channel); identified uneven spend distribution and surfaced reallocation recommendations to improve overall budget efficiency.

Retail Pricing & Profitability Intelligence | Python, SQL, Tableau | [GitHub](#)

- Preprocessed retail transaction data using Python (Pandas, NumPy), removing duplicates, handling missing values, and engineering a Profit Margin feature; ran SQL aggregations to analyze category profitability and introduced a Risk Score metric to flag loss-making transactions.
- Built an interactive Tableau dashboard (KPI: \$2.3M+ sales, \$286K profit) with discount impact scatter, regional performance bars, and category profitability views, enabling data-driven pricing and inventory decisions.
- Identified that excessive discounting was the primary driver of profit leaks; sub-category and segment-level SQL analysis surfaced actionable recommendations for pricing strategy optimization.

Education

Master of Science in Data Science and Analytics | Jain University, Bengaluru, Karnataka

August 2024 – May 2026

Bachelor of Science in Statistics | Sree Sankara College, Kalady (MG University), Kerala

October 2021 – May 2024

Certifications

Databases and SQL for Data Science with Python – IBM (Coursera)

Foundations of Machine Learning – IBM (Coursera)

Excel and Copilot Fundamentals – Microsoft

AWS Cloud Practitioner Essentials – AWS
